

ELECTRO-PROPORTIONAL VALVES—FLOW CONTROLS

PV70-35 Proportional Flow Control Cartridge,

DESCRIPTION

A linear solenoid-driven, two-way normally open, screw-in cartridge valve designed for use with a pressure compensator to function as an electrically stroked variable flow regulator.

OPERATION

With increasing electric current, the **PV70-35** changes from full open to full closed with flow from port ② to port ③. Port ① is used only to pressure balance the spool and should be plugged. The proportional valve is intended to function in tandem with standard HydraForce pressure compensators at pressure differentials of 21 bar (300 psid) or less, or alone in variable volume pressure-compensated circuits with load sense capability.

The valve is designed to work with industry-common controllers which typically feature current capability to 2 amps @ 12 VDC, PWM, and start/stop trim adjustments (1 min./1 max.). Consult factory for details and potential sourcing.

Operation of Manual Override:

To Engage: Turn clockwise approximately 1 turn to reach start point.

Continue another approximately 5 turns to full shift.

To Disengage: Turn counterclockwise approximately 6 turns to positive stop.
