

DIRECTIONAL VALVES

PE42-S67C Proportional, Pilot Operated

U.S. Patent
6,554,014

DESCRIPTION

A screw-in, cartridge-style, proportional, spring-centered, pilot-operated spool-type hydraulic directional valve.

OPERATION

When the **PE42-S67C** is in neutral position all ports are blocked. When the remote pilot signal at ① exceeds the force of the bias spring, the spool shifts proportionally to the applied pilot pressure to allow flow from ③ to ④ through a load such as a hydraulic cylinder or motor, and from ② to ⑤ and to tank. When the pilot signal at ⑥ exceeds the force of the bias spring the spool shifts proportionally to the applied force to allow flow from ③ to ② and from ④ to ⑤. When the pilot signal is less than the force of the bias spring, the spool will return to the center position. **The valve's spool is symmetrical, providing meter-in and meter-out control.**

FEATURES

- Hardened spool and cage for long life.
- Cost-effective cavity.
- Excellent metering characteristics.
- Good linearity.
