# PE16-S67K Proportional, Pilot Operated

#### **DESCRIPTION**

A screw-in, cartridge-style, proportional, spring-centered, pilot operated spool valve.

#### **OPERATION**

When the **PE16-S67K** is in neutral position, inlet port ③ is blocked while ports ②, ④ and ⑤ are connected to each other. With remote pilot signal at port ①, the valve's spool shifts proportionally to the applied pilot pressure to allow flow from ③ to ④ through a load such as a hydraulic cylinder or motor, and then from ② to ⑤ and to tank. Port ② is open during transition. On remote pilot signal at ⑥, the spool shifts proportionally to the applied pressure in the opposite direction, reversing the flow direction. Port ④ is open during transition. **The spool is non-symmetrical, providing only meter-in control.** 

#### **FEATURES**

- · Hardened spool and cage for long life.
- · Cost-effective cavity.
- · Excellent metering characteristics.
- Good linearity.
