FR16-20F Regulator, Pressure-Compensated

A screw-in, cartridge-style, fixed orifice, pressure-compensated, hydraulic flow regulating valve (restrictive type).

OPERATION

DESCRIPTION

The FR16-20F maintains a constant flow rate out of @ regardless of load pressure changes in the circuit downstream of 2.

The fixed control orifice is factory preset to customer flow specification. The valve begins to respond to load changes when the flow through the valve creates a pressure differential across the control orifice greater than 5.5 bar (80 psid), with accurate flow maintenance from 7.6 to 240 bar (300 to 3500 psid). Reverse flow (2 to 1) returns through the control orifice and is non-compensated.

FEATURES

- Hardened parts for long life.
- Quiet, modulated response.
- · Cost-effective cavity.
