

FLOW CONTROLS

FR10-32 Flow Regulator, Orifice Adjustable,

DESCRIPTION

A screw-in, cartridge-style, pressure-compensated, manually-operated, bi-directional hydraulic flow regulating valve. An internal compensator spool provides compensated flow across the proportional orifice regardless of flow direction.

OPERATION

The **FR10-32** provides regulated flow in both directions, from port ② to port ③, or from port ③ to port ②. Port ① should be blocked. Regulated flow increases from closed to fully open with clockwise rotation. The valve will maintain the set flow rate regardless of pressure variations at each of the ports.

FEATURES

- Hardened seat for long life and low leakage.
- Various adjustment options.
- Excellent linearity and hysteresis.
- Industry common cavity.
